Admin & lead guide

Run a meeting's attendance in seconds.

Everything core admins and team leads need: the roster, groups, running meetings with the projector QR, excuses, strikes and exports.

1. Who can do what
2. The dashboard
3. Members and the roster
4. Groups and leads
5. Running a meeting
6. Excuses
7. Strikes, semesters and exports
8. Meeting-day checklist

Screens in this guide come from the app's demo mode. Names such as Alice, Bob and Carol are sample users, not real members.

ROLES

Who can do what

Role	Can do
Core admin	Everything: dashboard, all meetings (including full body), groups, members and the roster, semesters, excuses, strike adjustments, CSV export, flagged-member review.
Team lead	For their own group only: create, start, close and delete its meetings, run the projector view, add or remove members, review excuses and export attendance. No access to full-body meetings or other groups.
Approver	An admin whose edits to member details (name, roll number, mail ID, admin rights) apply straight away. Other admins' edits wait for an approver. Today: the tech lead and the secretary.
Advisor	Can sign in, but has no attendance requirement and no strikes.
Member	Checks in, sees their own standing, requests excuses.

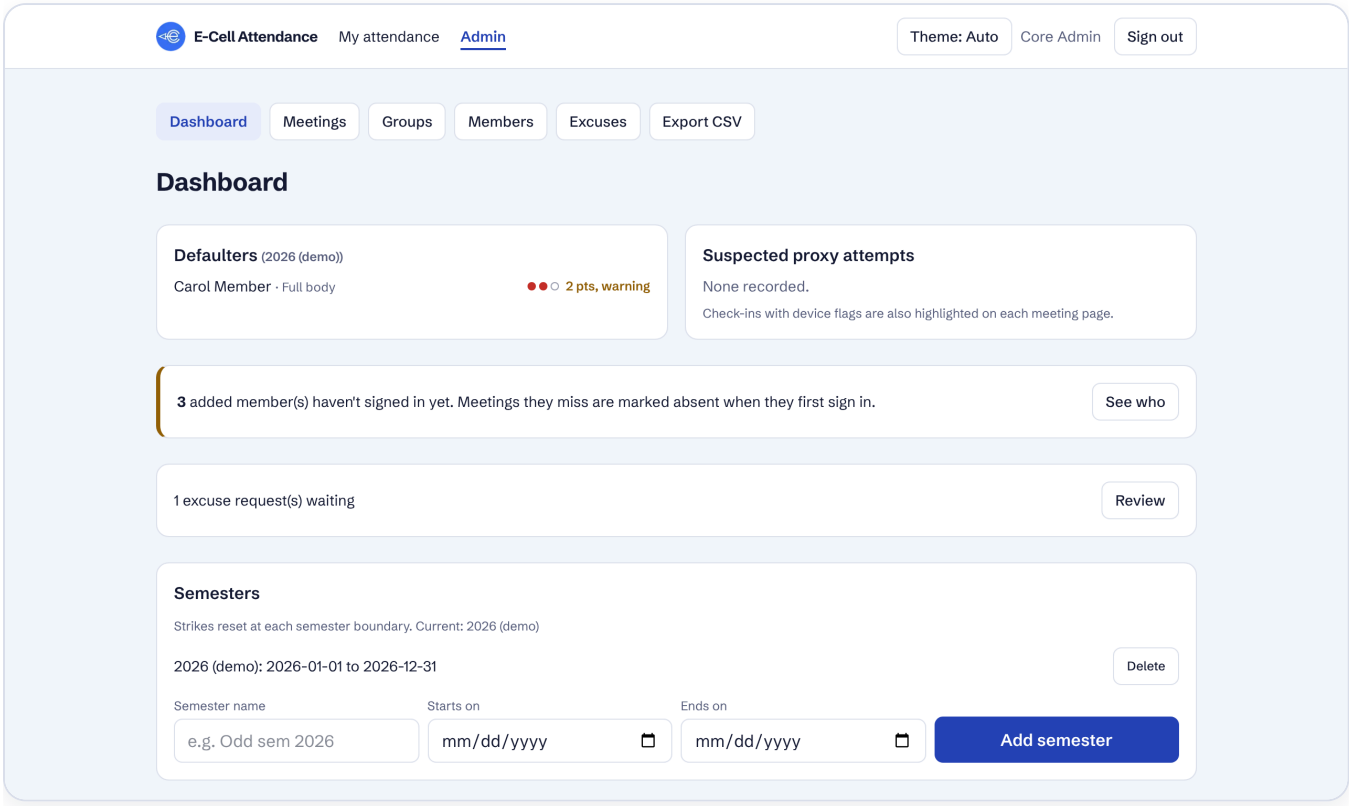

> Admins aren't counted for full-body meetings. Approver and advisor roles are set directly in the database by the tech lead, never from the app, and nobody can change their own rights.

Getting around

Open **Admin** in the top bar. The tabs are **Dashboard**, **Meetings**, **Groups**, **Members**, **Excuses** and **Export CSV**. Leads see Meetings, Groups and Excuses. Your own strikes are always under **My attendance**.

DASHBOARD

What needs your attention

- **Defaulters**: everyone at 2 or more strikes this semester, and in which count. Here Carol is at 2 in Full body, a warning.
- **Suspected proxy attempts**: a phone already used for someone else, a new device or a device mismatch. Each is also flagged on the meeting page.
- **Not signed in yet**: roster members who haven't joined. Meetings they miss count once they sign in.
- **Excuse requests waiting**, with a shortcut to review them.
- **Semesters**: strikes reset at each boundary (more on page 9).

MEMBERS

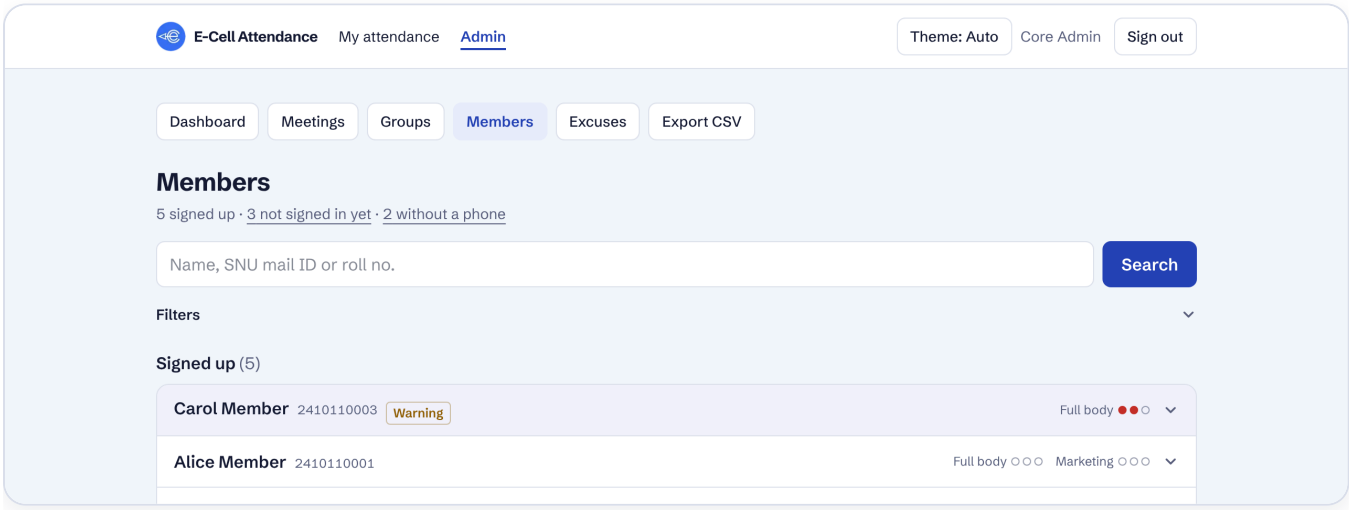

Add people from Excel

Under **Members → Import members from Excel**, copy the rows straight from the club sheet and paste them in. Columns: **name, roll number, SNU mail ID**, plus an optional fourth column `admin` to make someone an admin.

- Names are capitalised for you and may not contain numbers. Roll numbers are 10 digits starting with 2.
- Pasting someone already on the roster updates their entry, so re-pasting a sheet is safe. A duplicate row, or a mail ID or roll number that belongs to someone else, is skipped and reported.
- Imported people show as *not signed in yet* until they first sign in.

The member list

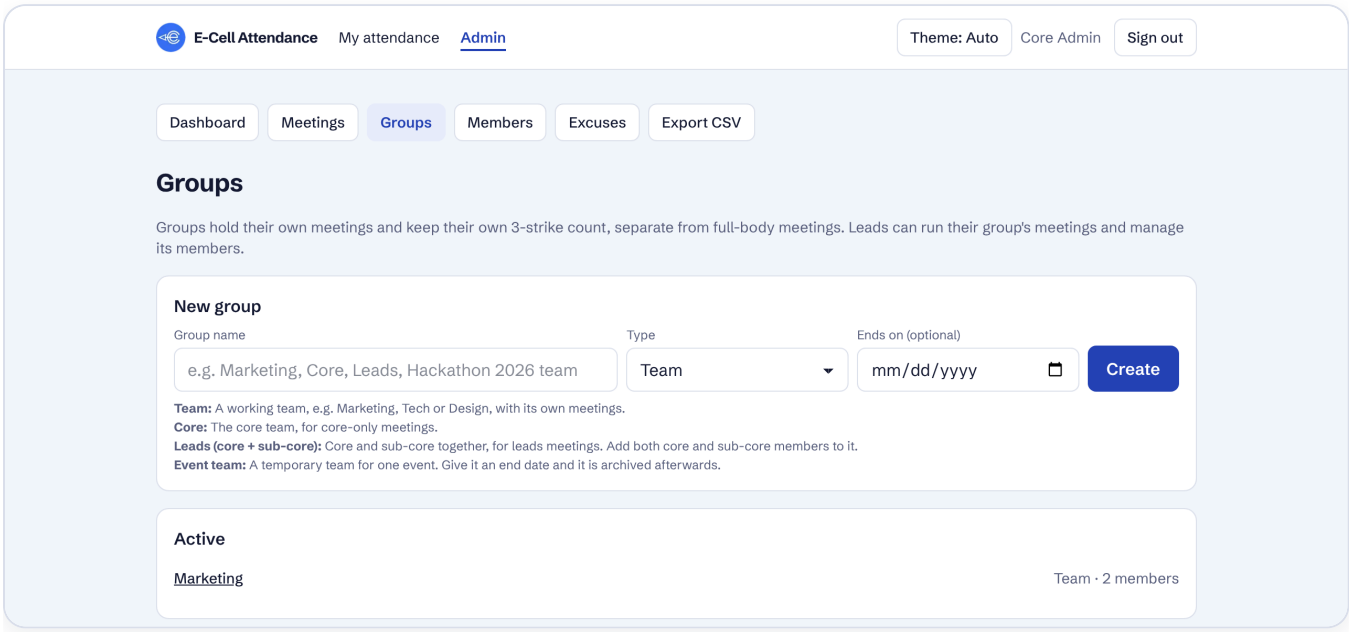

Flagged members sort to the top. Open a row for their standing in each count, recent records, phone status and actions: edit details, **reset their phone** (when they change phones), adjust strikes with a reason, or deactivate. Filter by team, standing or "no phone yet". Edits by non-approvers wait in *edits waiting for approval*.

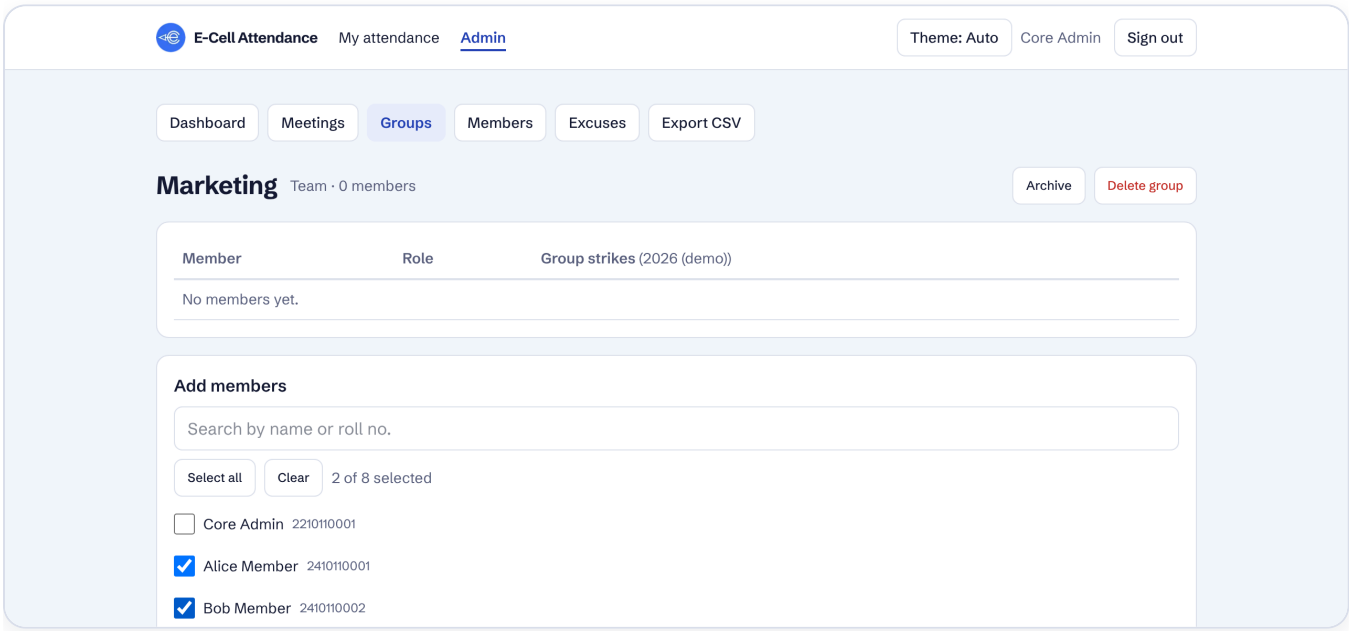

GROUPS

Teams, core, leads and event teams

Create groups under **Groups**: the seven teams, Core, Leads, or a temporary **event team** with an end date. Each group keeps its own 3-strike count, separate from full body.

Open a group to add members. Search by name or roll number and tick people, or paste a list of SNU mail IDs. People who haven't signed in yet join automatically the first time they do.

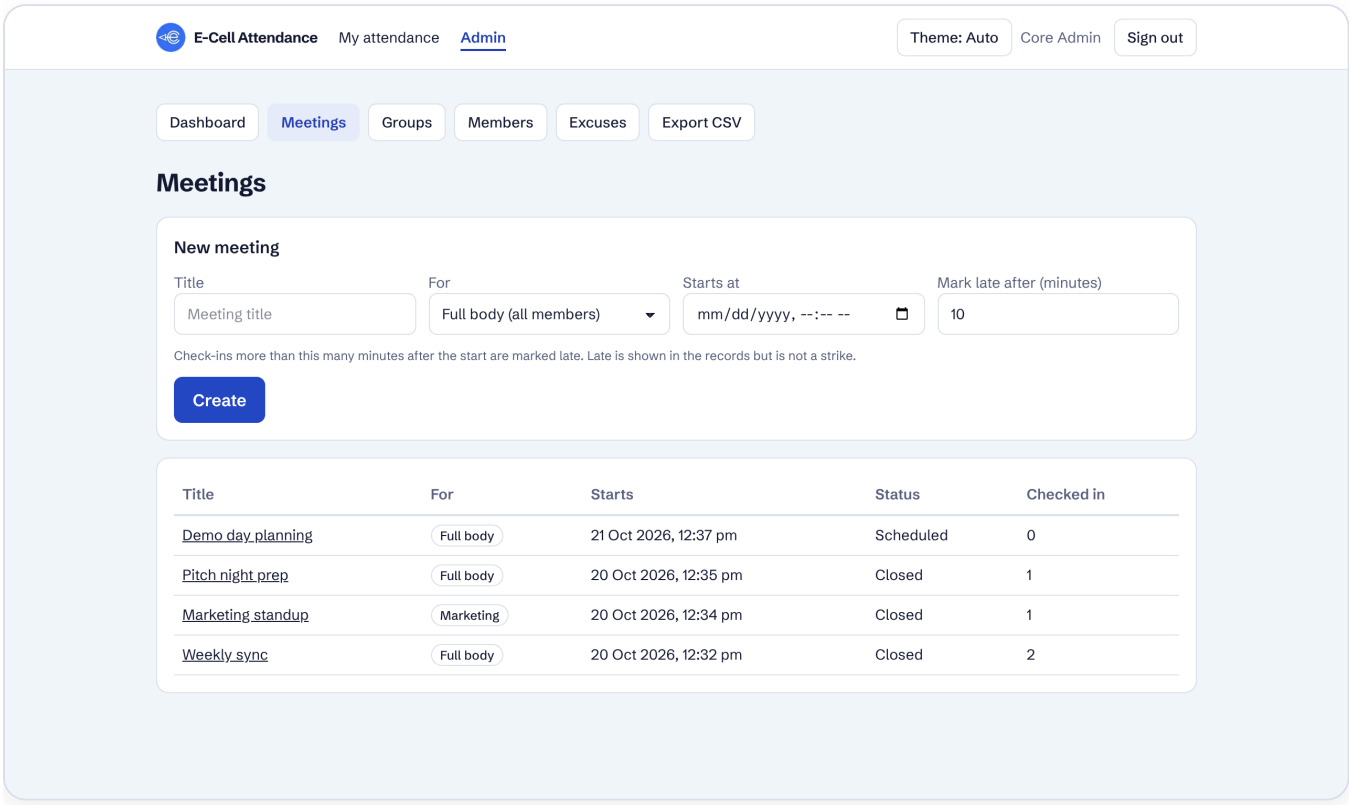

- Make any group member a **lead**. They can then run that group's meetings on their own.
- Event teams drop out of the "new meeting" list after their end date. **Archive** a group when it's done. History and strikes are kept.

RUNNING A MEETING · 1

Create the meeting

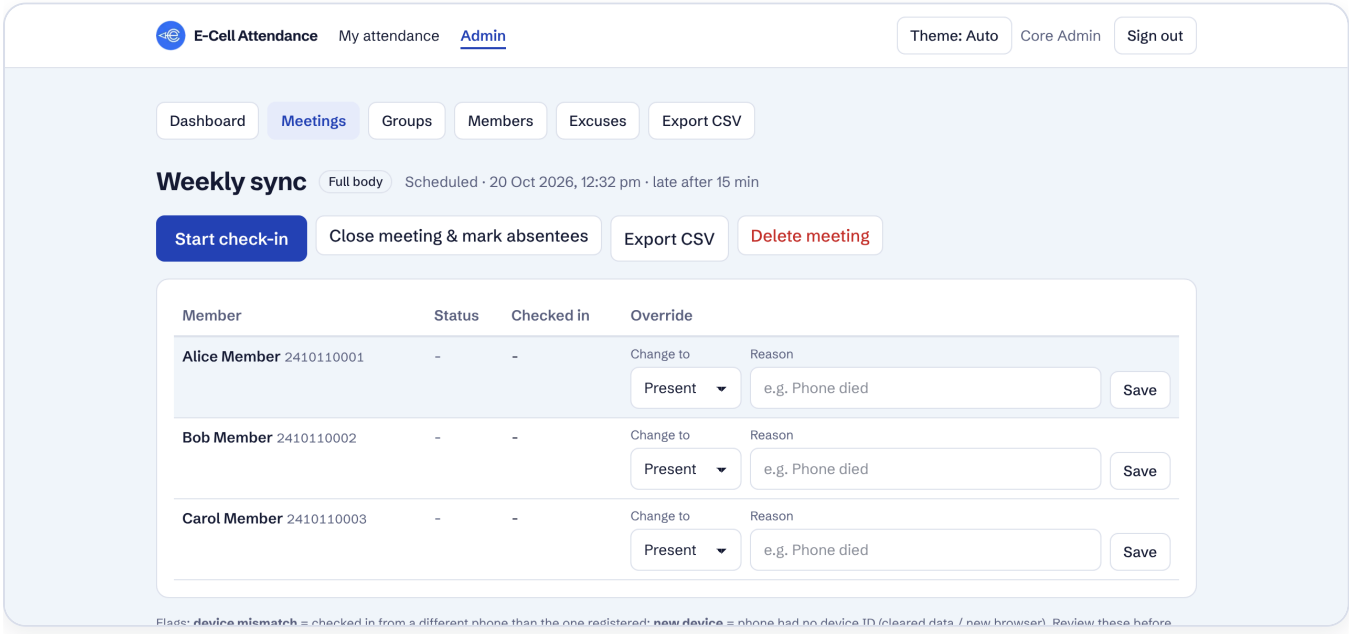

In **Meetings**, fill in **New meeting**: a title, who it's **for** (Full body or one group), the start time, and after how many minutes check-ins count as late.

The list below shows every meeting with its audience, status and how many have checked in. Click a title to manage it.

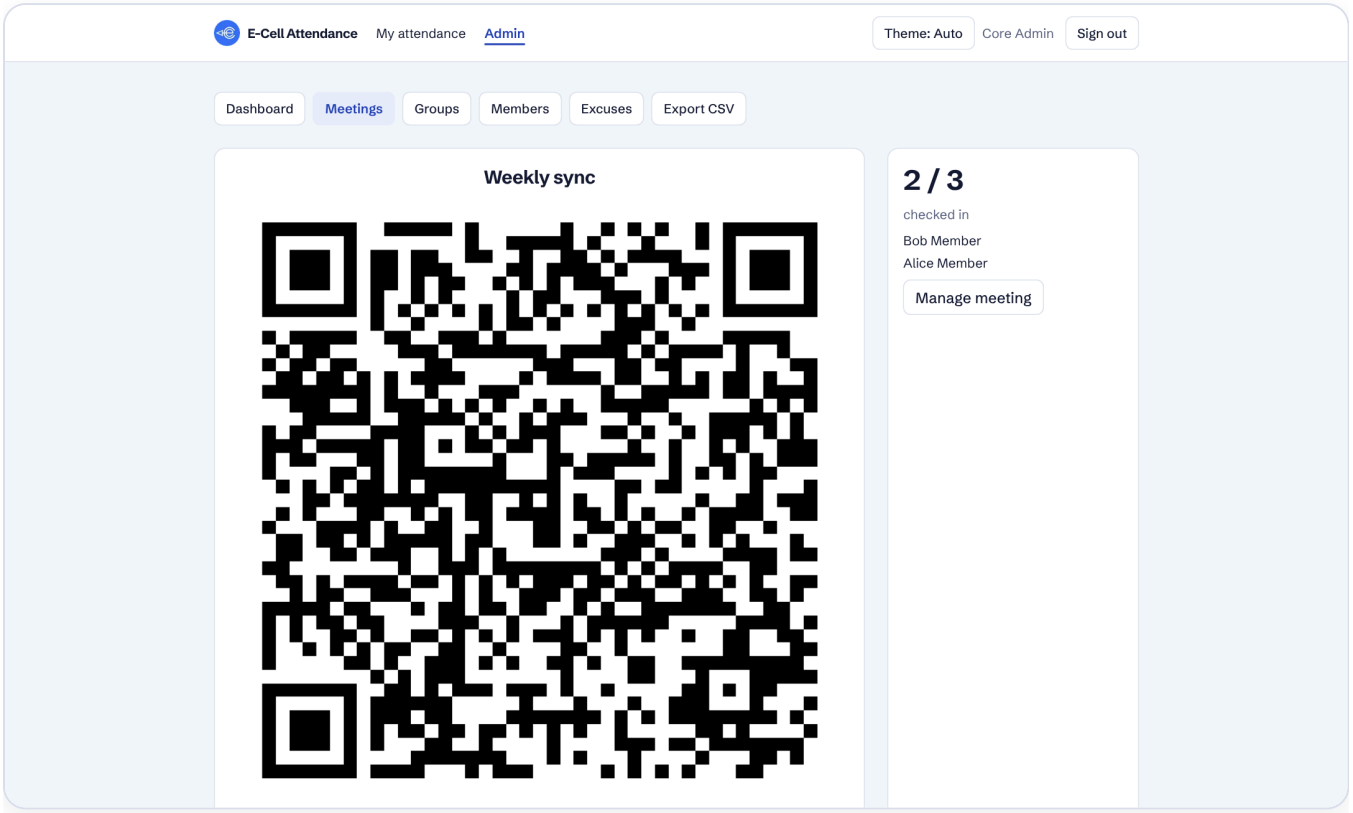

Start check-in

On the meeting page, press **Start check-in**. It opens the projector view. Only the meeting's audience can check in or gets marked absent.

RUNNING A MEETING · 2

Put the projector view on screen

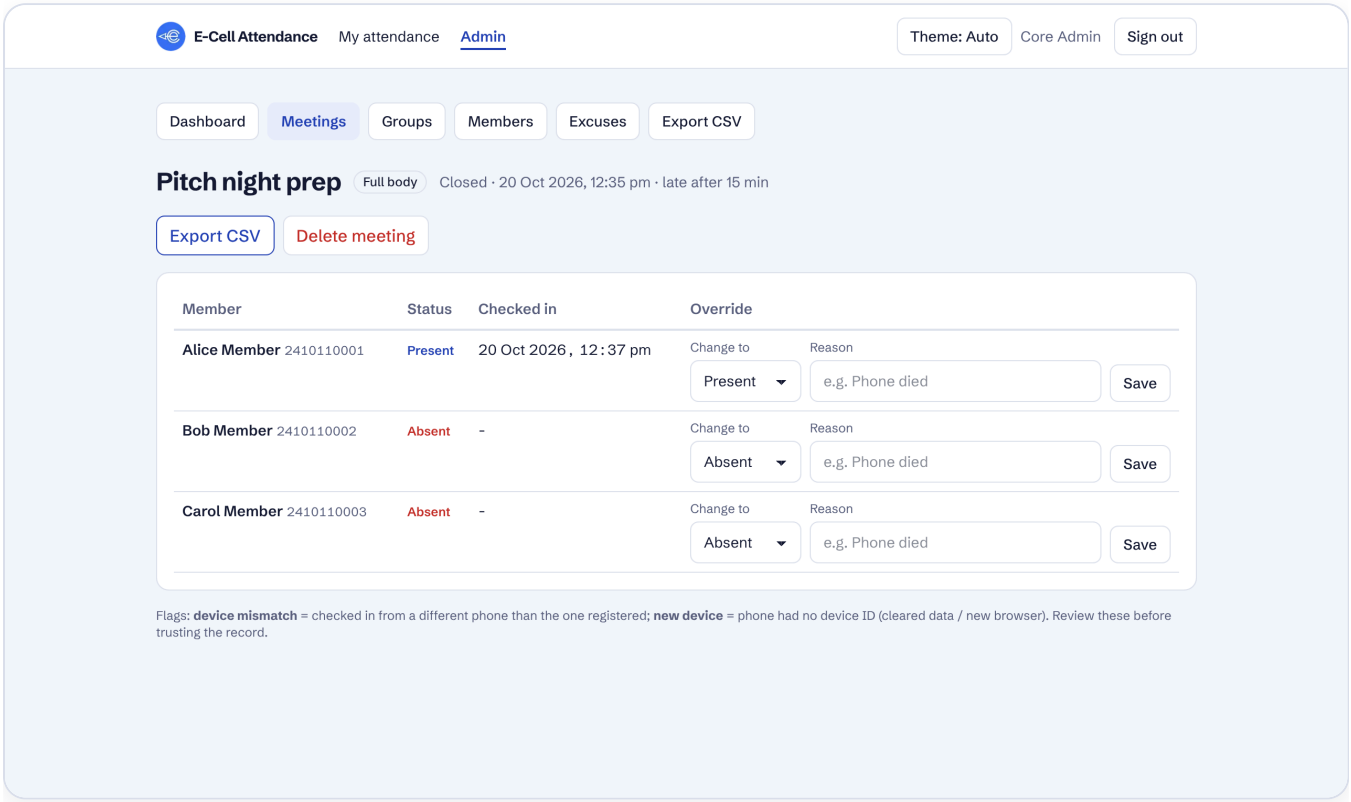

- The QR code **changes every 10 seconds**, so a photo sent to someone outside won't work.
- The counter (here **2 / 3**) and the name list update live as people check in.
- Leave it up for the first few minutes. Latecomers can still scan; they're marked late after the grace period, with no strike.
- Use **Manage meeting** to go back to the meeting page.

> **Known gap:** someone in the room could live-stream the QR to a friend outside, who has about 20 seconds to scan. If you suspect it, do a quick roll-call spot check.

RUNNING A MEETING · 3

Close it and check the records

When the meeting is over, press **Close meeting & mark absentees**. Everyone in the audience who didn't check in is marked **absent**, or **excused** if their excuse was approved. Absences then count as strikes.

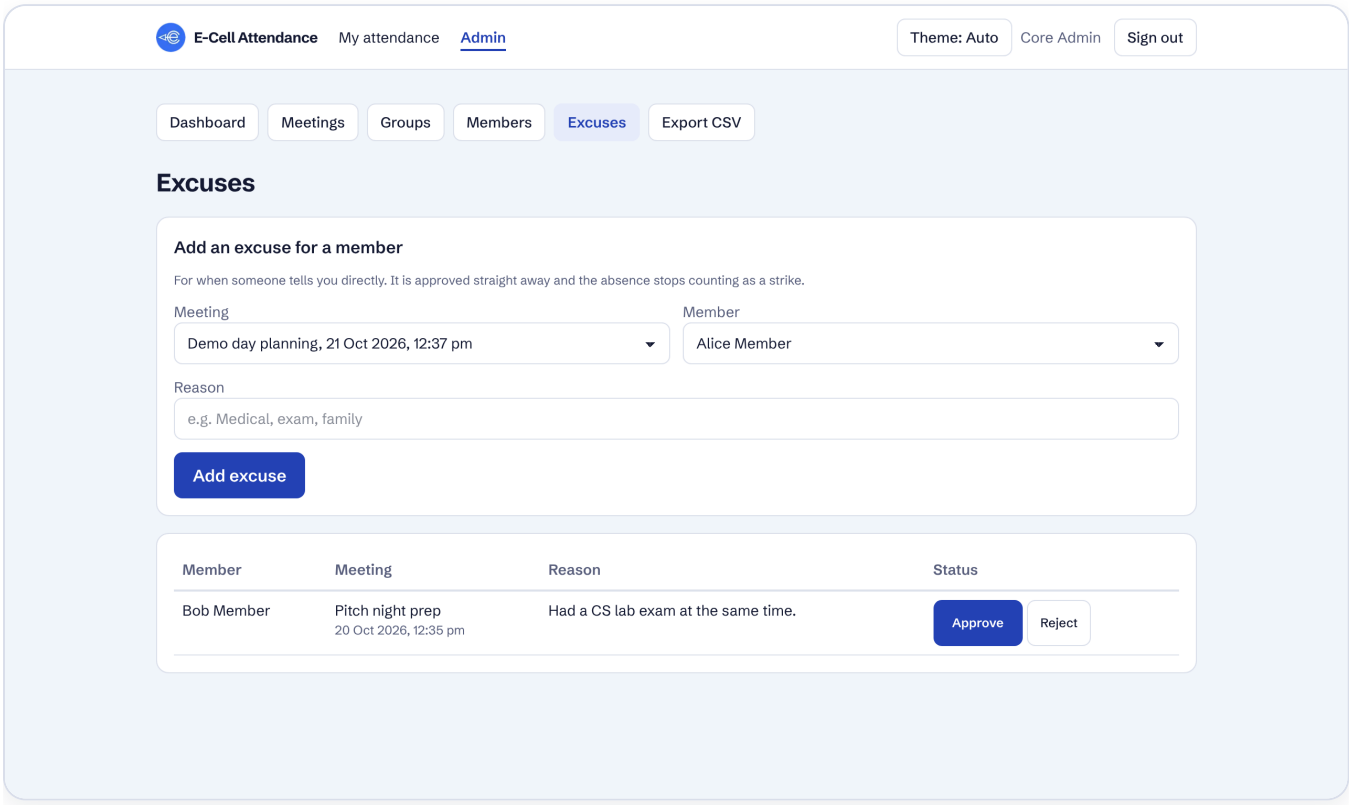

- **Fix a record**: use *Change to* on any row (present, late, absent, excused), with a reason. It's audit-logged.
- **Device flags** (*new device*, *device mismatch*) are highlighted on the row. Look into them before the strike count matters.
- **Export CSV** downloads this meeting's attendance.
- **Delete meeting** if it was created by mistake. Its attendance, excuses and strikes go with it.

EXCUSES

Review excuses

Members can ask for an excuse up to 24 hours after a meeting starts. Requests land in **Excuses** (and as a count on the dashboard). Admins see all of them; leads see the ones for their group's meetings.

- **Approve** to remove the strike. The record becomes *excused*.
- **Reject** to keep it as an absence.
- When someone tells you in person, use **Add an excuse for a member**. It's approved straight away, even after the 24-hour window.

STRIKES & HOUSEKEEPING

Strikes, semesters and exports

Event	Points
Unexcused absence	1
Late check-in	0 (recorded, not penalised)
Approved excuse	0
2 points in a count	Warning shown to the member
3 points in a count	Flagged on the dashboard; admins decide

- **Each count is separate**: full body and every group.
- **Adjust strikes** from a member's row on the Members page, always with a reason.
- **Semesters**: add them on the Dashboard (name, start, end). Points reset at each boundary; overlapping semesters are refused.
- **Export CSV** (top tab) downloads attendance for your records.
- Overrides, phone resets, member edits and proxy attempts all go to an **audit log**.

How proxies are stopped

Attempt	What stops it
Sending a photo or link of the QR	The code is signed and expires within seconds
Giving a friend your login	Check-in needs a passkey on the member's own phone, unlocked by their biometrics
One phone checking in several people	One device checks in one member per meeting; extra attempts are refused and logged
Registering a friend's account on your phone	One passkey per member; a phone registered to someone else is refused
Clearing browser data	Check-in is flagged *new device* / *device mismatch* for review

CHECKLIST

Meeting day

Before

- [ ] Meeting created for the right audience, with the right start time and late window.
- [ ] New members imported and told to sign in and register their phone *before* the meeting.
- [ ] Laptop on the projector, signed in as an admin or the group's lead.

During

- [ ] Press **Start check-in** and leave the projector view up for the first few minutes.
- [ ] Watch the live counter. Help anyone who can't check in (new phone? needs a reset).

After

- [ ] **Close meeting & mark absentees**.
- [ ] Check flagged rows and fix any records, with a reason.
- [ ] Review excuses within a day or so.
- [ ] Glance at the dashboard for defaulters at 2 or 3 strikes.

> Attendance is a nudge between peers, not a policing tool. A quick word with someone at 2 strikes usually does more than a flag at 3.
